Coralife provides several options for power management and control of your aquatic system electrical components. To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyzes reviews to verify trustworthiness. Please try again later. Kmh88 1.0 out of 5 stars I reprogrammed it thinking it was user error. Unfortunately, the next night the timer completely shut off and my biocube was without heat, lights and a powerhead for about 9 hours. I lost hundreds of dollars worth of coral and fish and I am devastated!! This product apparently has other reviews that say it reprograms itself and it should NOT be sold anymore to prevent further aquarium losses. Sending this piece of junk back for a refund. This is not possible. Please be aware of the following, which has been confirmed by Coralife Only the yellow outlets are programmable and, They are not programmable independently of one another. These 7 cycles DO NOT correlate with the day of the week. This was a major misconception with several user instructional videos. How Coralife can make this a more valuable product Make more outlets programmable and make them programmable independently of one another. <http://agence-sml.com/files/epiphany-paintball-gun-manual.xml>

### • 1.0.

However, it doesn't even seem to keep the time or programming anyway, so it's pretty much just an overpriced power strip, that apparently can cause fires according to other reviews I would suggest looking elsewhere. I regret buying it. It is now January of 2019. It worked great and did what it was supposed to do when it worked. For the past few months around October it started switching sooner than it should had them switching at 8 am and 8 pm. They started switching at 7. Then yesterday I switched around my reptile room and when I plugged it back in, the screen was no longer working. My night lights immediately came on. I couldn't get the screen to work again so I couldn't reprogram it. Unfortunately there aren't many outlets with the timers that switch day and night lights. I love the idea of the design, I just wish it worked a little bit better. I bought this April 2017 and it worked good got about 6 months. After that the timer feature just stopped working completely. I never got a chance to email the company to find out if there was a warranty or not my fault but I wouldn't BUY another one but if they'd like to EXCHANGE this one for a new one I'd be willing to give them another try. Only writing this review because a friend came over and asked if he could have it bc he saw it sitting in a box. The blue sockets turn on when the yellow go off. That's it. It also has a rdm setting with no explanation. It randomly turns on 15 mins or less from your time you set on the timer. Which I guess is kind of cool but still doesn't solve the fact this thing sucks. Unless you're using night lights. Absolutely useless as a timer power strip. My old one was back from 2014 and I was surprised that in 2020 the technology no change it continue with same flaws First of all this is very attractive and essential product for aquarium hobbits as it have day and night timer. <http://cetra.uniza.sk/cms/fckeditor/editor/filemanager/connectors/php/uploads/epson-tm-h6000-iii-programming-manual.xml>

So you are supposed to program once and let it do its job However I am surprised they are yet to

add mini cell in the power system to remember the program and not erase all data in case of power loss Initial programming is easy, its just lengthy, it doesnt allow you to do in one go but need to set time for each day of week. First one worked flawlessly, this one the timer doesnt turn the plugs on so completely useless for what I bought it for. Unfortunately I already threw out the box so Im stuck with it. Sorry, we failed to record your vote. Please try again Sorry, we failed to record your vote. Please try again Should have listened to the other reviews Sorry, we failed to record your vote. Please try again. Either the thing is junk or Im not getting the programing right. Other forums report similar difficulties. The instructions are a little vague but not bad. I get the programing in okay but the unit doesnt respond as it seems it should. Its in auto mode and I see in the insructoins it says to let it cycle for 24 hours if there is a problem. I did that but its like the wrong outlets day vs. Only had an issue with the manual ones. The digital runs my HQIs and the manual runs as a wave maker. I had the same problem in auto, the night plugs were on when the day plugs should be on. Once I did that, the plugs worked right. Hope this helps someone with a similar problem. When it works, the Coralife Digital Power Center does a good job. Louis SEASL Lauderdale Reef Central TM Reef Central, LLC. Please try again later. The digital feature allows the alternating timer to set the day/night cycle at different times of the day at different days of the week. When the 2 daytime timer controlled outlets are on, the 2 nighttime timer controlled outlets are off. Day/Night Timer the Power Center is a day/night dual timer device that provides complete 24 hour lighting cycles from dawn, noon, dusk and nighttime. WAVEMAKER APPLICATION The Power Center can control two sets of water pumps using the alternating timer total of four outlets at 15 minute intervals min. or more to create a wavemaker application. The two sets of outlets will interchange between each other based on the timer setting. This wavemaker application creates a natural rhythm in your aquarium that replicates ocean tidal movements. All letters will be shown in their capitalized form. All letters will be shown in their capitalized form. Well, now I have the Nova Extreme with the moonlights, and the fan that needs to be put on a timer. Im also going to put the canopy on so I gave it more of an effort and it seemed to not be going well. The lights would not turn on when I programmed them following the directions. Thinking I had a defective unit. I went out and purchased another. Gave it another go. This is what I found out. Well these units have 2 yellow daytime and 2 blue nighttime outlets. The yellow and blue outlets alternate power, the yellow and blue outlets cannot be on at the same time.

<https://directori.p2pvalue.eu/explore/cbpp-communities/community/datasheet/command-adaptive-drawbar-dynamometer-manual>

When one switches off the other switches on automatically, and you can program when they switch. The instructions makes it sound like youre programming the yellow plugs day going on and off, its the opposite, It seems youre timing the blues. So I had to plug my lights in the blue plugs and my moonlights in the yellows yes, I double checked the a.m. and p.m. settings too! Both Power Centers are doing the same thing. I even tried it with regular lights and changed the programming to go on and off within a few minutes to check which plugs where going on when. I even had my husband read the instructions to see what he got out of them for what patience he had to follow, he agreed it sounded like youre timing the yellows from the instructions So, has anybody else have the same

experience with these things. What does everybody else use besides these TinaI had to switch the lights to the yellow outlets last night since it seems to be working like it should now.the lights didnt switch off like they should last night so I swapped plugs, and they turned back on at the right time this morning. This timer is soooo lame. Does anybody know how long the battery will last in it either TinaWish I kept the box on the other one. TinaMechanical or digital with battery backup, thats what I use. I have 2 banks of lights, LED moonlights, and pressurized CO2 on my 125 gallon and I use 4 timers. Never a problem except having to reset the mechanical timers after power outages.As was stated, the only minor problem is resetting the timers after power outages. This setup should allow for more than enough flexibility and connections.I have 3 of these timers. 2 on my planted and 1 on my nano reef and they work perfectly fine. If you read the instructions it will tell you that the first cycle is not correct. Once you go through one cycle they will be OK. Your yellow will be day lights and blue will be your moonlights.

<http://www.indianantique.com/images/boss-fv50l-manual.pdf>

I cant comment on the battery life but I had mine for 6 months and it is still remembering the settings. Fire wise I had no problems as well.so far at least. Maybe some of the lights pull too much power and it fries the unit.I just dont know. On my nano reef I am using all the plugs, and have no problem.More expensive though.More expensive though. You currently have 0 posts. Please enter your desired user name, your email address and other required details in the form below. Note that passwords are casesensitive. The problem is that i am trying to have my 10,000K turn on at 11am, but i would like my actinic to turn on an hour earlier 10 am, but then turn off right at 11. This will simulate sunrise as you all know. Then i would like my 10,000K to turn off at 8 and my actinic on from 89 follow by just blue LED moonlights. The Instructions are so confusing. Any help would be appreciated! They are about 12 bucks a piece. You will be MUCH MUCH happier. The coralife stip sucks royally. Been there done that. The best ones to get are the out door timers.but they cost more. I just use a normal one and keep it away from water. Look into buying one of these as well.link at the bottom.it will make your life insanely easier. I run this switch board and my tank is easy to keep up with it.You can get them on Ebay a little cheaper.same exact thing. Just trying to save you money in the long run. Monochrome5, January 26, 2011 in Product Reviews These guys come in three versions a single timer, dual timer, and single digital timer. The following review will be for the dual timer version, which I own. Great for moonlight LEDs I highly recommend using a flathead screwdriver to get in there and click them down. For the price, its a really nice light controller. But thats where it ends. Seems to work just fine for that. I also have it run my heater and moonlights when the actinics click off. Since I run an 8g biocube, having the heater only on at night isnt a problem for me.

<http://genesisrealtycorp.com/images/boss-fv-60-manual.pdf>

The lights throw more than enough heat to warm my tank to 80. The constant power outlet runs my MJ606, so Ive been able to successfully control my whole tank with this product. It will handle Picos and small, compact tanks with ease, but anything more than 8g or so is probably out of the question. I wouldnt suggest using it with controllable LEDs, though. Youd use up the constant power outlet just for the LEDs and then have 7 slots of wasted space. Throw at least 24 more constant power outlets on here and beef up the surge protection and it would be a fantastic little controller. Oh, and how hard would it be to throw in 4 little screws. Come on Coralife!! I was considering this timer but may not be able to live with the shortcomings that you mentioned. I may just stick with a few standard timers and a powerstrip for more flexibility. Would be nice to have that all in one unit though. I was considering this timer but may not be able to live with the shortcomings that you mentioned. Would be nice to have that all in one unit though. The digital settings are TOTALLY dependent on the little replaceable battery that comes with it. IOW, when the battery is exhausted the timer side is useless. The battery is in use constantly even when the unit is plugged in so you soon lose all your settings, the LCD screen goes blank and until you install a new battery nothing

works on the timer side. I gave up on the thing after I came home a third time to a blank LCD screen, and my lights off. Went to the hardware and bought a much cheaper digital timer that has an internal battery that is kept charged while plugged in DUH and is only in use as a back up for your settings during power outages. Whoever engineered that coralife POS digital timer should be sent back to 3rd grade. It deletes all timer settings and resets the clock to 1200. I was considering this timer but may not be able to live with the shortcomings that you mentioned. Would be nice to have that all in one unit though.

They're pretty solid. 4 timed outlets with 8 constants. The digital settings are TOTALLY dependent on the little replaceable battery that comes with it. Went to the hardware and bought a much cheaper digital timer that has an internal battery that is kept charged while plugged in DUH and is only in use as a back up for your settings during power outages. Whoever engineered that coralife POS digital timer should be sent back to 3rd grade. I'm really baffled that the LCD battery doesn't charge when plugged in. That's just plain stupid. I get the feeling that the same guy who decided to make the LCD battery not charge made the decision to only put one constant power outlet on the dual timer. Idiot. They're pretty solid. 4 timed outlets with 8 constants. I'm really baffled that the LCD battery doesn't charge when plugged in. I get the feeling that the same guy who decided to make the LCD battery not charge made the decision to only put one constant power outlet on the dual timer. Idiot. I should have realized the issue and taken it back when the instructions state you MUST install the battery before you can use the LCD screen and enter your settings. You can't just plug it in and use it that way. Now I use it as a very expensive power strip on the uncontrolled side only. Timed outlets are totally unreliable. It happened on one of the timer and now the other one is starting to do the same thing. I've come home to find lights have been on for like 18hrs. Unreliable. I had it given to me for free and I paid too much. Others have mentioned the problems, and there are many. Do not buy. That strip handled all of it. It does require a second power strip for pumps, filters, etc, but that was acceptable to me. It is a specialized piece of equipment, but if you have need for it, the coralife is a nice solution. Learn more The Best Aquarium Light Timers for 2020 August 3, 2020 August 2, 2020 by Daniel Harper Aside from various fish tank accessories, water clearing products and equipment, one of the most essential devices that you must consider getting for your aquarium is none other than the best aquarium light timer. Undoubtedly, digital outlet timers are deemed as fish tank necessities these days which make them a

must have. These are comparably less pricey and, as a matter of fact, they could help you save more money since these can exceptionally manage the lighting needs of your fish tank in an automatic mode. Besides, these are quite dependable to utilize as they play a vital role in warding off the sprout of algae since your aquarium light is turned on for a longer period of time. Truth is, light timers aren't just meant for aesthetic purposes. These are quite indispensable if you are the type of aquarium keeper who's always on vacation or always out for business trips.

If your aquarium is equipped with a digital light timer, then you won't have worries even if you're out of town most of the time. You can have the peace of mind that even if you're far away, your aquarium pets and aquatic plants will be free of any danger since they are secured with appropriate and reliable lighting conditions.

Conclusion

Best Aquarium Light Timer Reviews 2020

1. Century 24 Hour Plugin Mechanical Timer

If you are hunting for aquarium lighting timers that are designed with single outlet timer and are not complicated to use and understand, then Century 24Hour Plugin Mechanical Timer can give you that. You won't have any trouble setting it up and you don't need to spend extravagantly just to get it. You can actually operate it immediately in minutes without any sweat. This model is designed with mechanical buttons that are intended to easily set the time. This is what makes it more convenient to use as compared to other mechanical timers that operate with the aid of removable pins. You will less likely to misplace or lose pins since these are fused into the device. Starting this light timer is a piece of cake as well. You only need to modify the dial in order to specify the present time and push down all of the buttons between the on and off time.

However, this device generates a little noise and it is not possible to modify the different schedules for different days.

Pros

- No sweat to set up and can be done in minutes
- Comes with easy to understand design
- Risk free and dependable to utilize
- Does not come with loose parts unlike other models
- Turns your device on and off in an automatic method

Cons

- Incapable of adjusting different schedules for different days
- May produce slight buzzing sound

Overall, if you prefer a light timer that is easy to install, built with simple design and can work reliably for your fish tank lighting needs, then this version is worth considering. It is equipped with mechanical buttons that ensure ease and convenience of use. It works automatically so you can be at peace leaving it for a long time. It also comes with less costly price tag so it won't spoil your limited budget. Meanwhile, if do not prefer a device that generates slight buzzing sound and incapable of modifying different schedules for different days, then perhaps you may look for other versions.

2. Odyssey Timer Module for Beamswork or EVO Quad LED Aquarium Light Timer

If you're going to closely observe the entire design of this aquarium timer, you will discover that this version is undemanding to install and utilize. Unlike other models, it does not get lost along the way when operating it. It is equipped with two buttons when installing it. In addition, when it comes to its installation process, you can instantly alter the hour up to the minute that you prefer the time to turn on or off the light. In case, you get so confused on how to set it up, you can rely on the manual instructions. In so doing, you'll get the idea that the process is actually straightforward. It is worth noting that this serves as a very convenient approach of controlling your fish tank light. Thus, even if you are always out for work or business, then you can depend on it to take care of your aquarium lighting needs.

Truth is, it is nice to have a device that could automatically manage your fish tank lighting

requirements. On the other hand, this light timer is limited to use as it merely works with a few specific models. And, there are instances when it incoherently halts working. These are a few of the weak points you need to be aware of. Pros Makes fish tank lighting a breeze Smooth sailing to utilize Comes with reasonably priced selling cost Quite uncomplicated to set up Adept at controlling blue and white LEDs separately Cons Only works with specific models Has the tendency to randomly stop functioning To sum things up, this model is worth a try. Taking into account its versatility, ease, reliability and convenience of use, there is no denying why it is regarded as one of the most top pick models for most aquarium owners. Apart from these, it is certified userfriendly yet very affordable even for those with limited budget. Note that this only works with some specific versions and has the potentiality to inconstantly stop working. Anyhow, wouldn't it be delighting to know that there is no need to spend more to enjoy excellent light timer performance features. As you know, this is a rare offer nowadays so you better grab it. 3. BNLINK 8 Outlet Surge Protector with Mechanical Timer This topnotch fish tank light timer is ideal for a plenty of uses particularly in a daylight cycle for aquariums, live aquatic plants as well as reptile enclosures. In the same way, it is equipped with a total of four outlets that are regulated by the timer wherein four outlets are often on. What makes this model safer and more reliable to use is that all the eight outlets are entirely safeguarded by the surge protector and it is also furnished with a circuit breaker switch in order to provide more safety. If you'll thoroughly inspect it, you'll unveil that the outlets are exquisitely distanced from each other which makes plugging all types of distinct shaped plug a lot easier into them.
